

<DynaPel®

Water Protection for the Circular Future

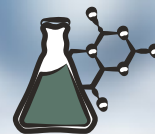

Powered by EMP3L.

Robust Water Protection

Enhanced Water Repellency Durability

No intentionally added PFAS

Compatible with Recycling Systems

YKK™

Little Parts. Big Difference. >>>

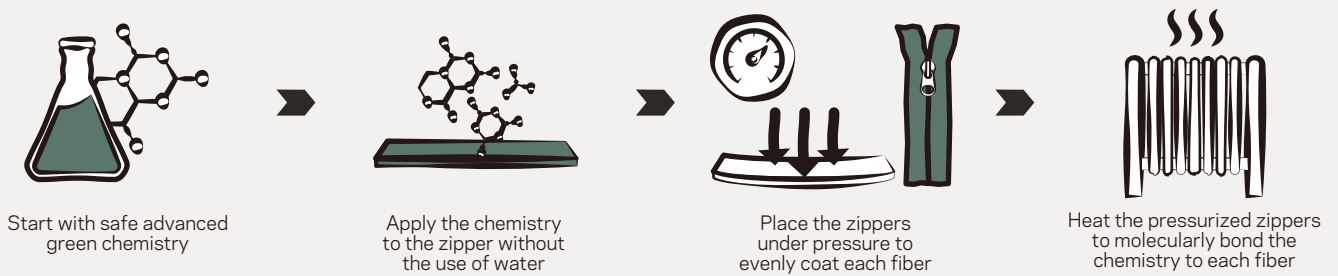

The future of water protection is here. DynaPel® offers unprecedented water repellency*¹ without the need for a PU coating. Using advanced green chemistry*², combined with a unique manufacturing process, DynaPel® offers a highly water repellent fastener*¹ with a low environmental footprint*³. With a recycled tape and compatible green chemistry, DynaPel® is designed for circularity.

DynaPel® provides durable and long-lasting water protection. Using a unique process that applies heat and pressure, the chemistry penetrates the surface of the yarn, and through molecular crosslinking encapsulates the entire yarn with a water repellent layer. Invisible to the eye, the treatment is extremely resistant to abrasion and the impacts of laundering*⁴.

*1 Based on internal water repellency testing data
 *2 OEKO-TEX® Eco Passport certified EMPEL® chemistry
 *3 Based on ongoing internal Life Cycle Assessment (LCA) data calculations
