YKK manufactures more than 3 million kilometers of fasteners a year around the world. This is equivalent to more than 80 times the circumference of the earth. If such a large quantity is produced, the amount of metals, nylon and other materials used, the plating applied to sliders, the dyes used to dye tapes, and the industrial wastewater produced in the manufacturing process is also enormous. As a leading company, we are committed to the development of technologies to manufacture high-quality products, while always keeping the global environment in mind and aiming to be a company that is close to the local community.
