giving new life to used textiles

The NATULON® Fiber Sourced™ zipper helps to advance apparel circularity by using textile waste and discarded clothing as input materials to create zipper tapes by making a part of zipper from the same material. Materials made from chemical recycled monomers have the same strength as those made from virgin materials.

helping to enable garment circularity

The NATULON Plus® zipper with Recycled PET open parts is made with as much PET material as possible without sacrificing strength or durability. By making a part of zipper from the same material as is used in the majority of clothing today, we are helping to enable the recycling of those garments at the end of their life.
